

Data-Driven Policy & Intervention Recommendations Report

Derived from the TabFM Zero-Shot Regression Analysis of 60 Teachers × 103 Features (July 2026)

Executive Summary: The recent comprehensive data imputation using TabFM regression revealed several critical gaps between teacher training and classroom execution. While theoretical buy-in and digital engagement are remarkably high, on-the-ground application of pedagogies (like lesson plans) and structural retention of CLSS workshops are lagging. The following recommendations are tailored to address these specific execution bottlenecks.

1. Bridging the 'Training-to-Classroom' Execution Gap

The Data Reality: 93.3% of teachers find in-person training useful, yet only 28.3% confidently apply the provided lesson plans/modules in the classroom. A staggering 50% are 'Not sure' if they are applying them correctly.

Proposed Intervention	Target Audience	Expected Impact
In-Class Demonstration (Handholding)	The 50% 'Not Sure' cohort	Convert uncertainty to confidence through peer shadowing.
Simplified 'One-Pager' Lesson Plans	All teachers	Reduce cognitive load. Current modules are perceived as too complex.
JSK Application Audits	Low-application schools	Shift JSK focus from 'attendance' to 'classroom observation'.

Actionable Next Step: Launch a 'Micro-Teaching' pilot where Jan Shikshaks (JSKs) conduct 15-minute live demonstrations of the Margdarshika lesson plan during their school visits, rather than just delivering the manual.

2. Overhauling CLSS (Cluster Level Sharing Sessions) Retention

The Data Reality: Despite 86.7% attendance, 43.3% of teachers could not recall a single topic from the CLSS. Furthermore, cascading knowledge back to the school relies heavily on unstructured 'verbal discussions' (23 teachers) or no process at all (18 teachers).

Proposed Intervention	Implementation Mechanism	Urgency
Standardized Visual Agenda Cards	Distribute printed 1-page visual summaries at the start of every CLSS.	High
Mandatory 5-Min School Assembly Brief	Require returning teachers to share 3 bullet points in morning assembly.	Medium
Gamified Recall via WhatsApp	JSK to send a 1-question quiz via WhatsApp 2 days post-CLSS.	Low / Experimental

Actionable Next Step: Require Headmasters (HMs) to allocate a dedicated 10-minute slot in the weekly staff meeting exclusively for the CLSS attendee to formally cascade learnings, replacing informal verbal chats.

3. Optimizing DIKSHA Digital Course Delivery

The Data Reality: 100% awareness and 85% completion rate. However, 'Not Aware' (35 mentions) of specific new courses and 'Technical Issues' (27 mentions) remain massive barriers. The most preferred duration is 2 hours, primarily done 'After School'. Interactive features (Quizzes: 30, Videos: 27) drive engagement.

Insight	Current Strategy	Recommended Pivot
Top Info Source: JSK WhatsApp (50 mentions)	Relying on dashboard / state portals	Formalize JSK WhatsApp groups as the primary official broadcast channel.
Preferred Timing: After School (47 mentions)	Assuming in-school completion	Design courses to be downloaded offline during school Wi-Fi, completed at home.
Best Features: Quizzes (30), Videos (27)	Text-heavy PDF resources (15)	Pivot budget from text resources to interactive quizzes and short animations.

Actionable Next Step: Establish a centralized 'Tech Support Hotline' or WhatsApp chatbot to address the 'Technical Issues' barrier, which is currently preventing high-intent teachers from completing courses.

4. Fixing RSK MP Feedback / Attendance Drop-off

The Data Reality: The biggest barrier to filling out the post-CLSS attendance/feedback form on RSK MP is the 'Session end rush for teachers to leave the venue' (14 mentions) and generalized 'other' frustrations (39 mentions).

Recommendations:

- **Dedicated Administrative Window:** Mandate that the final 15 minutes of every CLSS is a 'pencils down, phones out' silent period strictly for RSK MP form submission before anyone is allowed to leave.
- **Offline Sync Capability:** Ensure the RSK MP form can be filled out offline and synced later, as network connectivity at rural cluster venues is often poor, contributing to the 'rush' and frustration.

5. Establishing the CM RISE Brand Identity

The Data Reality: There is a 65% 'Unbranded Activity Recall Gap'. Teachers are participating in activities, but unaided recall of the 'CM RISE' programme name is critically low (5%).

Recommendations:

- **Visual Unification:** Every piece of collateral (Margdarshika, DIKSHA course splash screens, CLSS banners, JSK WhatsApp posters) must carry a standardized, prominent CM RISE Teacher Professional Development logo.
- **Nomenclature Shift:** Stop referring to activities generically (e.g., 'Digital Training'). Rebrand them internally and externally (e.g., 'CM RISE Digital Educator Module').

Conclusion & Strategic Priority

The TabFM regression analysis proves that the Madhya Pradesh EDS cohort is not lacking in **willingness** or **attendance**. The primary friction points are **retention** (CLSS topics), **translation** (training to classroom application), and **technical friction** (DIKSHA/RSK MP).

By shifting the focus from 'increasing attendance' to 'improving in-classroom execution and technical support', the CM RISE TPD programme can significantly amplify its impact on student learning outcomes.
