

CONCEPT NOTE: QUALITATIVE RESEARCH STUDY

Unpacking Operational Friction & Pedagogical Translation in CM RISE TPD

State Education Department & RSK Madhya Pradesh | Technical Partner: Peepul / TPD Unit

Executive Summary & Study Rationale: While quantitative evaluations and AI foundation models (Google TabFM) have mapped baseline participation across 60 study teachers (**56 Subject Training, 53 CLSS, 52 Digital Training**), there remains a critical knowledge gap regarding *why* classroom lesson plan application lags behind attendance. This concept note outlines a rigorous qualitative research design to investigate the lived experiences, operational bottlenecks, and agency of government school teachers in translating professional development into daily classroom practice.

1. Research Objectives & Key Research Questions (RQs)

The qualitative study is structured around three primary inquiry pillars:

Inquiry Pillar	Primary Qualitative Research Question (RQ)	Target Focus Area
1. Pedagogical Translation	RQ1: Why do teachers report executing only 20-30% of Margdarshika lesson plan modules in their classrooms despite high training satisfaction?	Classroom realities: multi-grade teaching, large class sizes & pupil-teacher ratios
2. Digital Engagement	RQ2: What drives the gap between digital course completion (52/60) and actual content retention / active learning?	Compliance-driven playback, video duration fatigue & mobile device sharing
3. Peer Cascading	RQ3: How can informal hallway conversations following CLSS sessions be institutionalized into structured school briefings?	CLSS mechanics, Headmaster leadership & Jan Shikshak (JSK) facilitation

2. Qualitative Methodology & Sampling Framework

A **mixed-methods qualitative approach** combining grounded theory with contextual inquiry across 60 study teachers in Madhya Pradesh.

Sampling Strategy: Stratified Purposive Sampling across 4 geographic clusters:

- **Cluster A (Tribal / Remote):** Interior schools in Balaghat & Seoni with single-teacher or multi-grade setups.
- **Cluster B (High-Enrollment Urban):** Schools with >50 pupils per classroom in Bhind & district headquarters.
- **Cluster C (High Digital Adopters):** Teachers completing >3 DIKSHA modules per term.
- **Cluster D (CLSS Champions):** Teachers actively facilitating peer discussions during CLSS sessions.

Data Collection Instruments:

Instrument	Sample Size	Methodological Objective
In-Depth Interviews (IDIs)	30 Teachers	Unpack individual motivation, time allocation & administrative friction
Focus Group Discussions (FGDs)	6 Groups (36 Teachers)	Analyze peer-learning dynamics and CLSS cascade opportunities

Classroom Observation Protocols (CRO)	20 Classroom Visits	Validate direct application of Margdarshika activities
Key Informant Interviews (KIIs)	10 JSKs & Block Officials	Assess administrative support & monitoring mechanics

3. Theoretical Grounding & Analytical Pipeline

Conceptual Framework: The study applies the *Teacher Agency & Systemic Friction Model*. It evaluates how teacher intrinsic motivation interacts with external operational constraints (administrative duties, device access, syllabus timelines).

AI-Assisted CAQDAS Pipeline:

- 1. Transcription & Anonymization:** Audio recordings transcribed and scrubbed for PII.
- 2. Thematic Coding Rubric:** Dual-tier inductive (emergent notes) and deductive (RQ-aligned) coding using Dovetail / MAXQDA.
- 3. Local LLM Synthesis:** Querying local **Qwen2.5:14B** via Ollama to synthesize multi-transcript themes while maintaining strict data privacy.

4. Deliverables & Policy Implementation Roadmap

Phase / Milestone	Key Output / Deliverable	Target Date	Policy Impact
Phase 1: Tool Finalization	Validated IDI, FGD & CRO Field Guides	Month 1	Standardized field observation
Phase 2: Field Data Collection	30 IDIs, 6 FGDs, 20 CRO Field Logs	Month 2	Empirical qualitative evidence
Phase 3: Coding & Analysis	Qualitative Evidence Matrix & Qwen 14B Synthesis	Month 3	Thematic identification
Phase 4: Policy Brief & Report	State Policy Report & Executive Deck for RSK	Month 4	TPD Program Refinement

5. Strategic Recommendations for Research Governance

- 1. Embed Qualitative Feedback Loops in JSK Reviews:** Transition JSK monitoring visits from compliance checklists to qualitative mentoring debriefs.
- 2. Co-Design Modules with Remote Teachers:** Involve teachers from single-teacher schools in Balaghat/Seoni to co-design realistic classroom activity adaptations.
- 3. Establish a State Qualitative Research Repository:** Archive qualitative transcripts in a local Dovetail / Ollama repository to enable continuous longitudinal inquiry.
