

STRATEGIC TPD IMPROVEMENT ROADMAP

Evidence-Based Action Plan for CM RISE Professional Development

Synthesized from Power BI Analytics, TabFM AI Simulations & Field Research

Executive Synthesis: By integrating findings from the 4-page Power BI dashboard, TabFM Classifier predictions, and qualitative observer logs across 60 study teachers (**56 Subject Training, 53 CLSS, 52 Digital Training**), this report provides a 5-pillar strategic roadmap to eliminate operational bottlenecks, boost digital completion to 100%, and double classroom lesson plan execution.

1. Pillar 1: Closing the Awareness-to-Adoption Funnel Gap

Diagnostic Finding: Official awareness is low at 38.3% (23/60), yet digital participation reaches 86.7% (52/60) when links are pushed via WhatsApp.

Current Bottleneck: Teachers rely on informal WhatsApp postings (26.9%) or direct instructions (47.8%) rather than searching web portals.

Strategic Solution: Transition from passive web portal announcements to 1-click WhatsApp Broadcast Cards with embedded course links. Make WhatsApp the official broadcast channel for RSK/TPD updates.

2. Pillar 2: Micro-Learning Architecture for Digital Courses

Diagnostic Finding: 80% (48 teachers) prefer learning at home after school, and 30% request a 2-hour max window. Long 3-hour videos cause severe time fatigue (27.8%) and passive background playback.

Direct Field Evidence: "He generally starts the course and do some other work... His feedback was to give pdf of question answers."

Strategic Solution: Re-architect DIKSHA courses into 15-minute animated micro-learning modules. Follow every video immediately with a 2-question checkpoint quiz to validate active engagement.

3. Pillar 3: Re-engineering CLSS for High Retention & Cascading

Diagnostic Finding: 34.0% of CLSS participants recall NO topic, and 28.3% share ZERO learnings upon returning to school.

Strategic Solution: Mandate a formal 10-minute 'CLSS Debrief' during Monday morning staff assemblies. Supply returning teachers with a 1-page visual summary card to brief non-attending peers.

4. Pillar 4: Margdarshika Redesign for Multi-Grade Classrooms

Diagnostic Finding: Subject Training has the highest utility (92.9%), but 31.7% of teachers never received Margdarshika books. Those who did only execute 20-30% of activities due to multi-grade classroom strain.

Direct Field Evidence: "■■■■ ■■■■■■ ■■■■ ■■ ■■■■ ■■■ ■■■■ ■■■■ ■■■■... class strength makes regular implementation difficult."

Strategic Solution: Add explicit 'Multi-Grade Classroom Adaptations' in Margdarshika manuals (e.g., instructions on managing Grades 3-5 in one room). Audit logistics to ensure 100% physical delivery.

5. Pillar 5: Multi-Channel Training Bundles (TabFM AI Proof)

Diagnostic Finding: Google TabFM Classifier proves that standalone digital training has lower impact. Combining **Subject Training + Digital Micro-Learning + CLSS** pushes digital completion to **100% (60/60)** and eliminates memory decay.

Strategic Solution: Require Jan Shikshaks (JSKs) to bundle interventions: every teacher completing a digital module is automatically assigned a CLSS peer discussion slot.

6. Complete Implementation Action Matrix

Pillar / Area	Current Bottleneck	Immediate Tactical Action	Owner	Target KPI
1. Awareness	38.3% awareness rate	Deploy 1-click WhatsApp Broadcast Cards	TPD Comms	90% Awareness
2. Digital Courses	Passive playback / 27.8% fatigue	Pivot to 15-min animated micro-videos	Digital Content	100% Completion
3. CLSS Cascade	34% topic forgetfulness	Mandate 10-min Monday assembly debrief	Headmasters / JSK	80% Cascade
4. Margdarshika	31.7% non-receipt / multi-grade	Multi-grade activity redesign & audit	Academic Team	100% Receipt
5. AI Bundling	Isolated intervention silos	Bundle Subject + Digital + CLSS via JSK	District DIET	81.7% Adoption
